UPSIDE

37.1%

Q4 2026 scenario

Executive summary

Price is a lagging indicator in this thesis. Business performance and capital flows form the investment case; a price breakout provides confirmation. H1 2026 attributable profit rose 36.0%, with gross margin expanding to 17.3%. The next test is whether stronger earnings convert into cash.

The supplied charts show ANTM at 3,210, above MA100 at 3,169, alongside buying through AK, BK, YU and ZP. These signals support the existing BUY view, subject to cash conversion, sustained accumulation and support at 3,035-3,140.

Important points

Area	Evidence	Next test
Earnings	H1 profit +36.0%; gross margin 17.3%	Repeatable margins
Cash flow	H1 CFO (0.75tn); inventory 14.70tn	Cash conversion
Broker flow	Selected buying averages 3,173-3,212	Persistence of buying
Price	Above MA100; support 3,035-3,140	Breakout and volume

Conclusion

The upside case is stronger profitability followed by improving cash generation and continued buying interest. A sustained break below 3,035, weakening margins or renewed debt-funded inventory growth would weaken that case.

4,400 implies 37.1% upside from 3,210. It is the existing technical target, not an independently estimated fair value. Prices can anticipate published results; the lagging-indicator framing is the analytical approach used here, not a universal market rule.

Technical view

SOURCE: TRADINGVIEW / SUPPLIED RESEARCH

SUPPORT 3,035-3,140 Research support zone	MA100 3,169 Price above	CURRENT 3,210 10 Sep 2026	TARGET 4,400 Major resistance
---	---	---	---

The supplied chart suggests a tightening consolidation above 3,035-3,140, with higher lows and declining volume. This is consistent with diminishing selling pressure, but accumulation and a breakout remain interpretations to confirm.

MA100 at 3,169 is a trend reference. The report describes an emerging MA50/MA100 cross; moving averages follow price. A sustained range breakout on stronger volume would improve confirmation. Failure below 3,035 would weaken the setup; 4,400 remains the prior supply zone and technical objective.

Gold comparison

The supplied comparison suggests that ANTAM and gold have often moved together. Higher gold prices can support sales value, but earnings also depend on sourcing costs, sales mix and margins.

Read the chart alongside the financials. Gold strength alone does not establish ANTAM's fair value or guarantee a breakout.

Money flow

SOURCE: STOCKBIT / SUPPLIED RESEARCH

Broker	Period	Net buy	Lots	Average
AK	2-10 Sep	IDR 293.8B	925.2K	3,175
BK	3-10 Sep	IDR 175.4B	551.6K	3,178
YU	3-10 Sep	IDR 125.9B	397.2K	3,173
ZP	9-10 Sep	IDR 102.5B	319.9K	3,212

What the flow suggests

Buying through AK, BK, YU and ZP near 3,173-3,212 indicates demand around the prevailing price. The supplied snapshot also shows selling through XL, SQ and XC. Together, these observations are consistent with stock changing hands during consolidation.

Broker identity does not establish the nationality or investor type of every client. The broker periods differ, so these figures should not be presented as one market-wide net-flow total.

Confirmation to watch

Look for buying that persists across comparable dates, higher traded volume on a breakout, and support that holds during pullbacks. Reversal of the selected buying flows would reduce conviction even if the price has not yet broken support.

NeoBDM and shareholder data

SOURCES: NEOBDM / STOCKBIT

Date	Shareholders	Monthly change
31 Mar 2026	240,673	+21,585
30 Apr 2026	218,250	-22,423
31 May 2026	244,558	+26,308
30 Jun 2026	265,094	+20,536
31 Jul 2026	264,817	-277
31 Aug 2026	250,149	-14,668

Interpretation

The disclosed holder count fell by 14,668 in August, or 5.5% from July. This indicates fewer reported holders, but does not by itself identify who sold, the volume sold, or whether ownership moved to foreign investors.

Read the count alongside broker flows and disclosed ownership. Persistent demand with a tightening price range would support the accumulation thesis; a falling holder count alone is insufficient.

Fundamentals and ownership

Financial summary

Metric	FY2024	FY2025	YoY	H1 2025	H1 2026	YoY
Revenue	69.19	84.64	+22.3%	59.02	62.71	+6.3%
Gross profit	6.50	13.68	+110.5%	8.24	10.85	+31.7%
Gross margin	9.4%	16.2%	+677 bps	14.0%	17.3%	+334 bps
Net income to parent	3.65	7.21	+97.7%	4.70	6.39	+36.0%
Operating cash flow	3.68	4.85	+31.8%	2.28	(0.75)	n.m.

FY2025 established a higher earnings base: attributable profit almost doubled. H1 2026 profit grew faster than revenue as gross margin widened by 334 basis points. The quality of that growth depends on cash conversion and the durability of the margin improvement.

Quarterly summary

Metric	Q1 2025	Q1 2026	YoY	Q2 2025*	Q2 2026*	YoY
Revenue	26.15	29.32	+12.1%	32.87	33.39	+1.6%
Gross profit	3.64	5.62	+54.5%	4.60	5.23	+13.8%
Net income to parent	2.13	3.41	+59.9%	2.57	2.98	+16.2%

Q2 revenue growth slowed to 1.6% YoY, while profit rose 16.2%. Gross margin was 15.7%, above 14.0% a year earlier but below Q1 2026's 19.2%. This makes margin sustainability a key H2 test.

* Q2 income-statement values = H1 less Q1. Amounts are IDR trillions; margins and growth are percentages. Attributable profit excludes non-controlling interests. Source: supplied Excel, Annual FS and Quarterly IS.

Balance sheet: 30 June, same-date YoY. Cash flows: six months to June; changes shown in IDR tn. Net cash excludes lease liabilities and other financial assets. Source: supplied Excel, Quarterly BS CF.

Profit needs to become cash

H1 operating cash flow was (0.75tn) against total net profit of 6.91tn: cash conversion was -10.9%, versus 44.2% a year earlier. Inventory rose to 14.70tn and receivables to 3.30tn. Cash of 9.23tn exceeds bank debt of 5.74tn, but net cash fell 66.0% YoY.

There are signs of sequential easing: inventory fell 12.8% and bank debt fell 32.0% from March to June. H1 cumulative operating cash outflow was also smaller than Q1's 3.15tn outflow. These improvements need to persist before stronger profit can be treated as stronger cash generation.

What could lead price next

Gold generated about 80% of H1 sales. Company-reported gold revenue grew 1% despite lower volume, pointing to a price/mix effect. Nickel revenue grew 32%. The next catalysts are durable margins, inventory release and positive operating cash flow; commodity-price weakness or renewed cash absorption would weaken the thesis.
